

Water, divulging about the sustainable future among people with disabilities

Water, element of life is the new exhibition Universum has served as a pretext to popularize science on climate change and sustainable future among vulnerable groups. It has developed a number of educational resources to convey the theme of sustainability to people with disabilities.

The exhibition *Water, element of life*, from conception contemplated the need to convey the theme of climate change and a sustainable future among people with disabilities teaching materials. Beyond adaptation of scripts of various educational support materials for the transmission of issues about the future of humanity and audiovisual media; it was necessary to sensitize and train all the support group that perform this work of popularizing science to this sector of the population that has always been unprotected.

In this presentation we want to show a successful example of how to transmit messages on climate change and a sustainable future of a cross-shaped, where not only the care of the vital liquid is the solution. Vulnerable groups are and will suffer more the consequences, so it is very important to create awareness and promote responsibility that corresponds to each us.
