## Advanced Visualization and Perception Research Group/Research

Last update : 2012.10.01

Data visualization is an indispensable step in the simulation researches. We can extract hidden information behind massive numerical data only through the visualization. When the output data to be visualized are small enough, simple graphs or charts are sufficient to understand what happened, or simulated, in the computer. However, when the data size becomes large, more sophisticated methods or tools than simple graphs are required for the data visualization.

One of the focused technologies in our research and development is the virtual reality (VR). Our VR system is described in other page. We investigate the application of advanced VR technology to

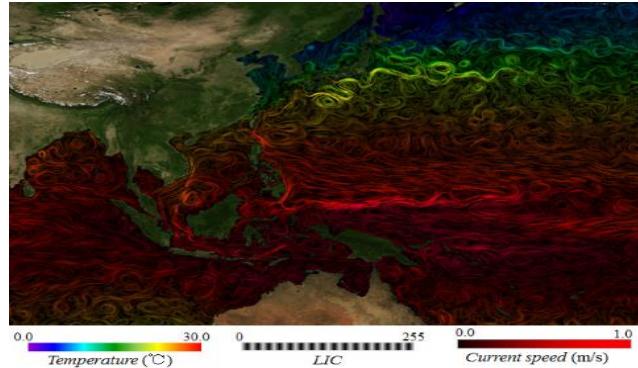

# Study on scientific data visualization

- Visualization for analytics
- Visualization for machine learning
- Visualization for scientific arts and artistic science
- Visualization for virtual reality (VR) System
- Visualization for general public

## Eddy detection

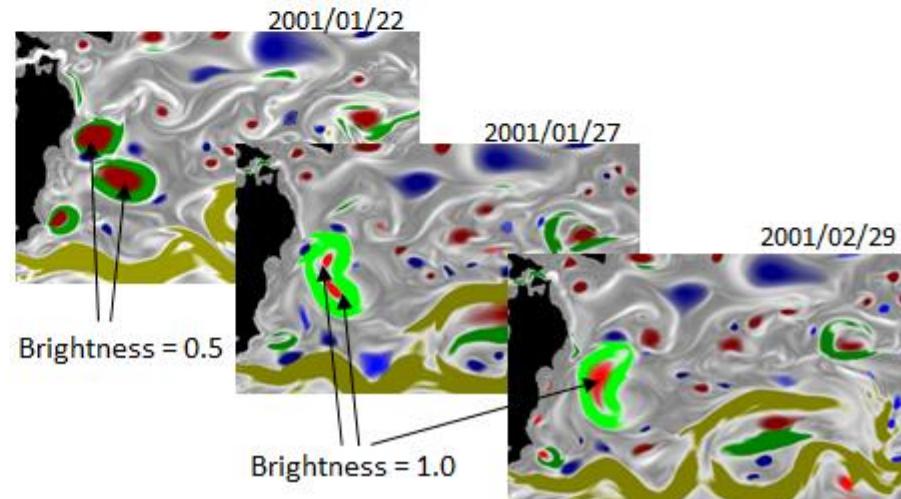

## Classification

1. Eddy
  2. Eddy with stream
  3. Eddy with current
  4. Eddy with current and stream
  5. Eddies with same stream
- 
- Below the list are five schematic diagrams corresponding to the numbered categories:
  - 1. Eddy: A simple red circle.
  - 2. Eddy with stream: A red circle with a green ring around it.
  - 3. Eddy with current: A red circle with a yellow ring around it.
  - 4. Eddy with current and stream: A red circle with both a green and a yellow ring around it.
  - 5. Eddies with same stream: Two red circles connected by a green ring.

The painting depicts a starry night sky with swirling, luminous clouds in shades of blue, yellow, and white. In the foreground, a dark, cypress-like pine tree stands on the left. Below the tree, a small town with a church steeple is nestled among rolling hills under the starry sky.

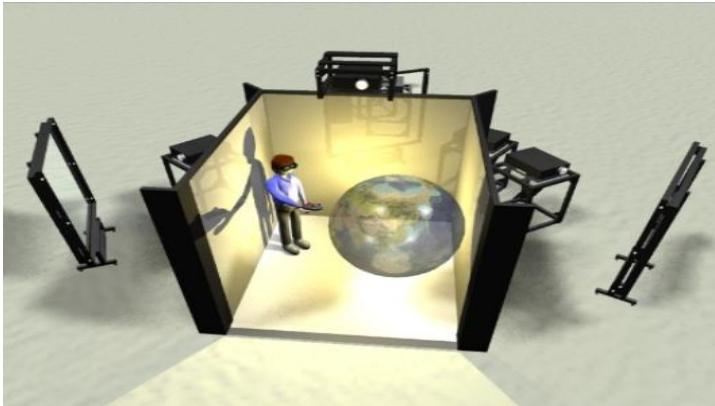

La nuit étoilée  
(The starry night, 星月夜)

Vincent Willem van Gogh, 1889

Kageyama et al., 2000; Ohno et al., 2006

Application to geo-dynamo simulation data

**Figure 1 | Equatorial and meridional cross-sections of the axial component of the vorticity,  $\omega_\phi$ .** The Ekman number,  $E_i$ , is  $2.3 \times 10^{-7}$  in **a** and  $2.6 \times 10^{-6}$  in **b**. Convective plumes are evident in the equatorial cross-sections. The meridional cross-sections show that the flow is nearly two-dimensional. The convection in these low-Ekman-number regimes is organized as a set of thin plume sheets, rather than columnar cells. It can be seen that the larger Ekman number in **b** leads to thicker plume sheets.

## JAMSTEC 施設一般公開 横須賀本部

平成28年5月21日(土)9:30~16:00 (15:30入場受付終了、雨天実施)

■特設会場 有人潜水調査船「しんかい6500」

初公開 海底広域研究船「かいめい」

■公開セミナー  
JAMSTECが異なる最先端の科学技術をお伝えします!

- 10:30~ 海底走査をうながすために一歩踏み出る最新技術...  
2階会議室
- 11:50~ 北極海の氷を観察する...ノーブルガスの検出...  
道の駅、小樽市駅
- 13:10~ 東北の海をめぐる...熱水噴出孔...熱水噴出孔の発見...  
北港会議室
- 14:00~ 「おつかれかいめい!」から「かいめい!」  
1階会議室

★実験・実演コーナー他イベント多数開催!  
※イベントの内容は随時変更されることがあります。
